

RPL Enhancements

Patrick Lynn

CADSWES

New RPL Operations

- Set operations (lists interpreted as sets)

- Inline comments

New predefined functions

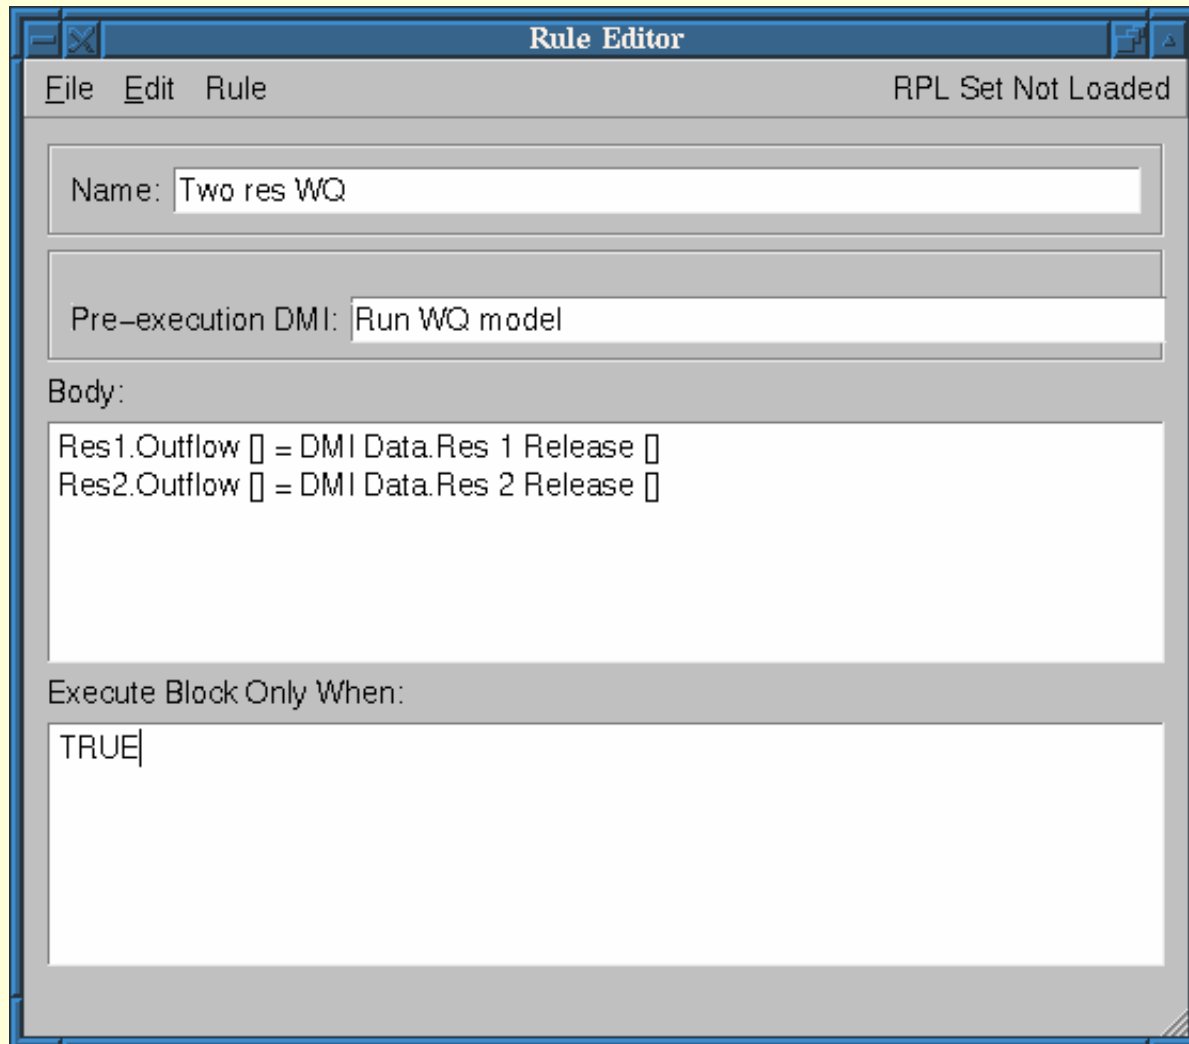

- DatesInPeriod
- Exp
- GetDate
- SortPairsAscending, SortPairsDescending
- Sort, Reverse
- Split

Executing DMIs from a rulebased simulation

Motivation:

- Execute external application during run
- Provide application with current data
- Use returned results in rules

Solution: allow rule to invoke a DMI group

Additional RPL enhancements

- Improved RPL set printing
- Predefined function support for:
 - PeriodicSlots
 - Account priority dates
- Editor dialogues reimplemented in Qt
