

New Accounting Visualization Tools in RiverWare

Background: Water Accounting

- Water accounting tracks water ownership and water type, i.e. “paper” or “colored” water
- Account types
 - Storage
 - Pass-through
 - Diversion Accounts
- Links between accounts are called supplies and can be classified by supply type, release type, or destination type

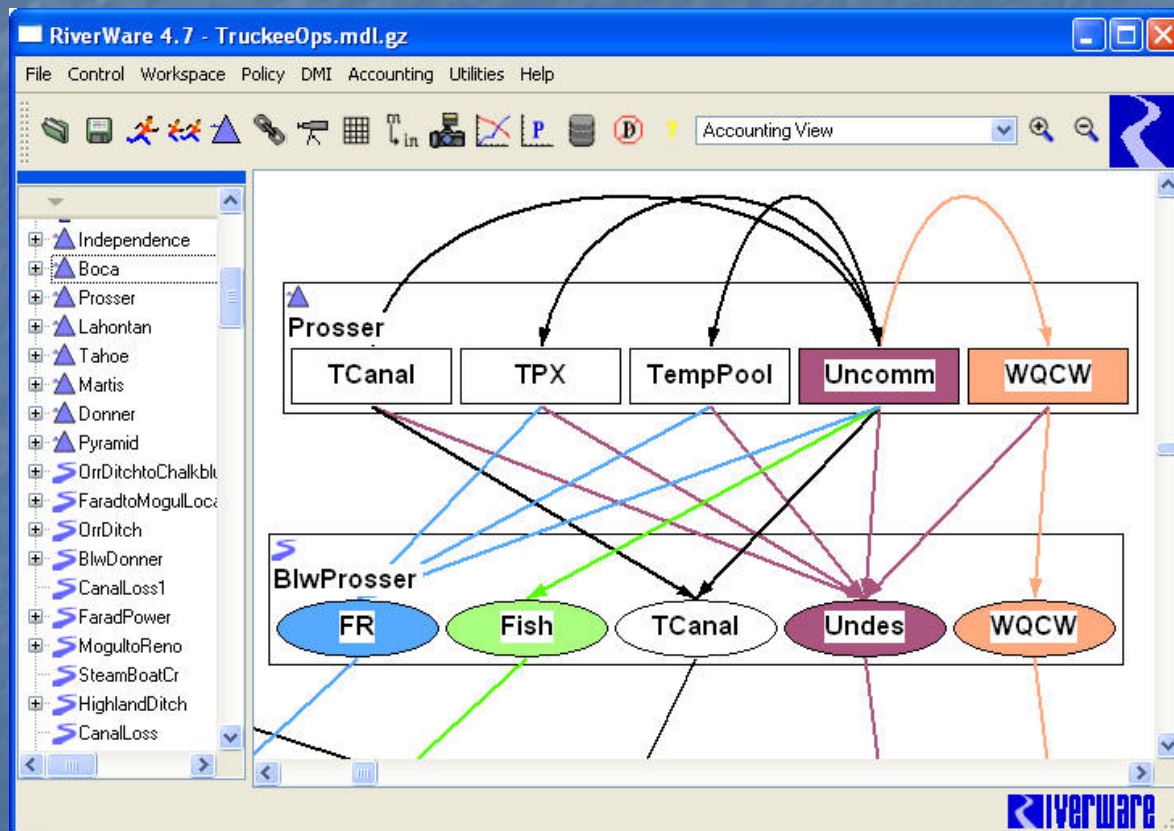

The problem

- It was very difficult to visualize a complex accounting network.
- The user had to develop and maintain a diagram of the system.

Solution: the Accounting View

- Provides an intuitive diagram of the network

Accounting View

- Useful way to display the system to stakeholders and water managers
- Allows for color coding, formatting, and aggregation of accounts and supplies
- Useful to:
 - Create
 - Reorganize
 - Link
- Demonstration!
