

RIVERWARE MODELING & ENHANCEMENTS

Corps of Engineers

Southwest Division

Tulsa District

Little Rock District

Ft Worth District

Galveston District

Today's Discussion:

Brief History: SUPER into RiverWare

Recent Effort

Ongoing Effort

Applied Modeling with RiverWare

Need for POR Basin Simulation:

- **Evaluate Proposed Changes with System Operation**
- **Flood Control, HP, Navigation, M&I, WQ**
- **Proposed Reservoirs**
- **Frequency Analysis**

Modeling Approach:

Flood Control:

Evacuate Flood Storage As Soon As Possible Given DS Constraints to Achieve “*System Balance*”

Conservation Pool:

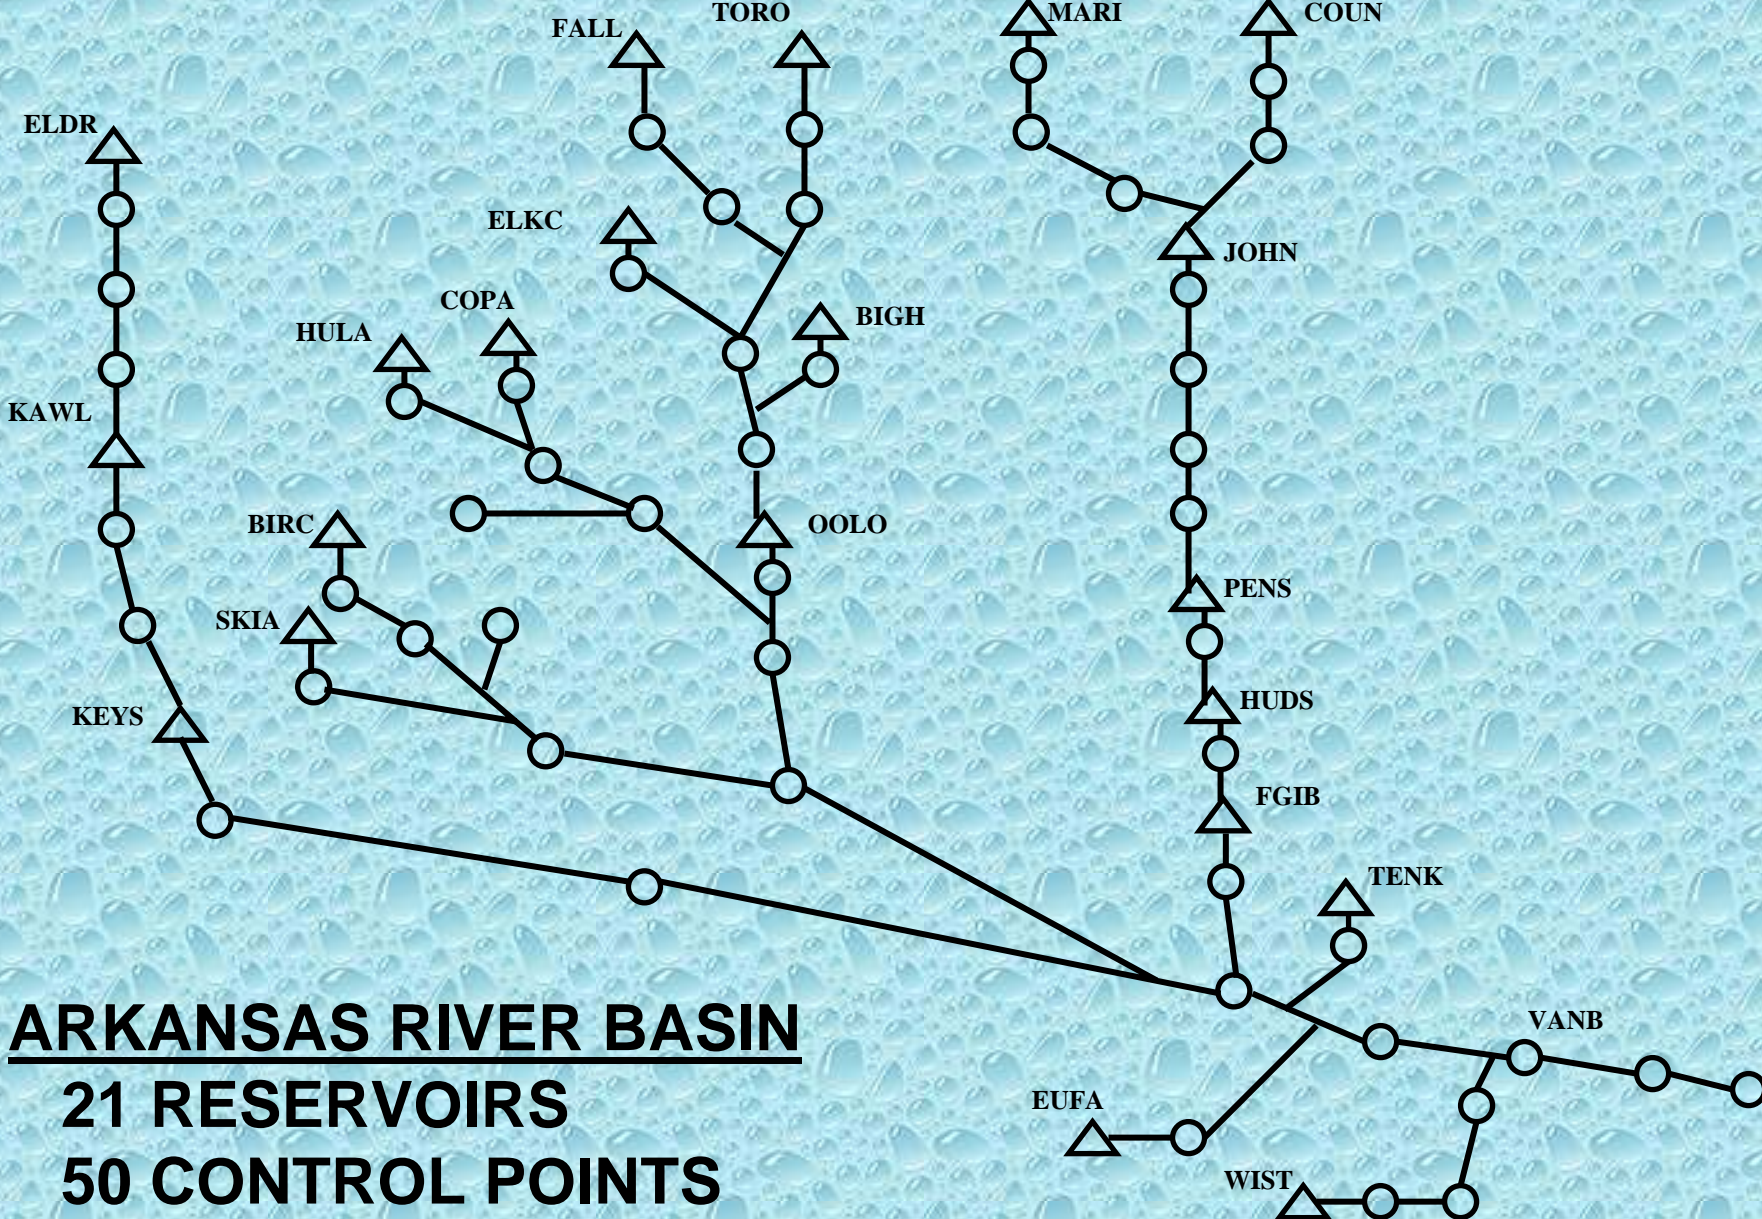

Balance Approach for Common Purposes

USACE storage divisions and balance levels

16 BALANCE LEVELS

- | | |
|-------------------------------------|------------------------------|
| 1 Zero storage | 9 10% Flood control |
| 2 Bottom conservation | 10 30% Flood control |
| 3 Bottom power pool | 11 50% Flood control |
| 4 50% conservation | 12 70% Flood control |
| 5 100% conservation
pool | 13 90% Flood control |
| 6-8 Typically not used | 14 100% Flood control |
| | 15 Top surcharge |
| | 16 Top of dam |

ARKANSAS RIVER BASIN
21 RESERVOIRS
50 CONTROL POINTS

History/Background:

- **SWD-COE Legacy Program: SUPER**
- **Used for 30+ Years**
- **Author/Expert Retired: Ron Hula**

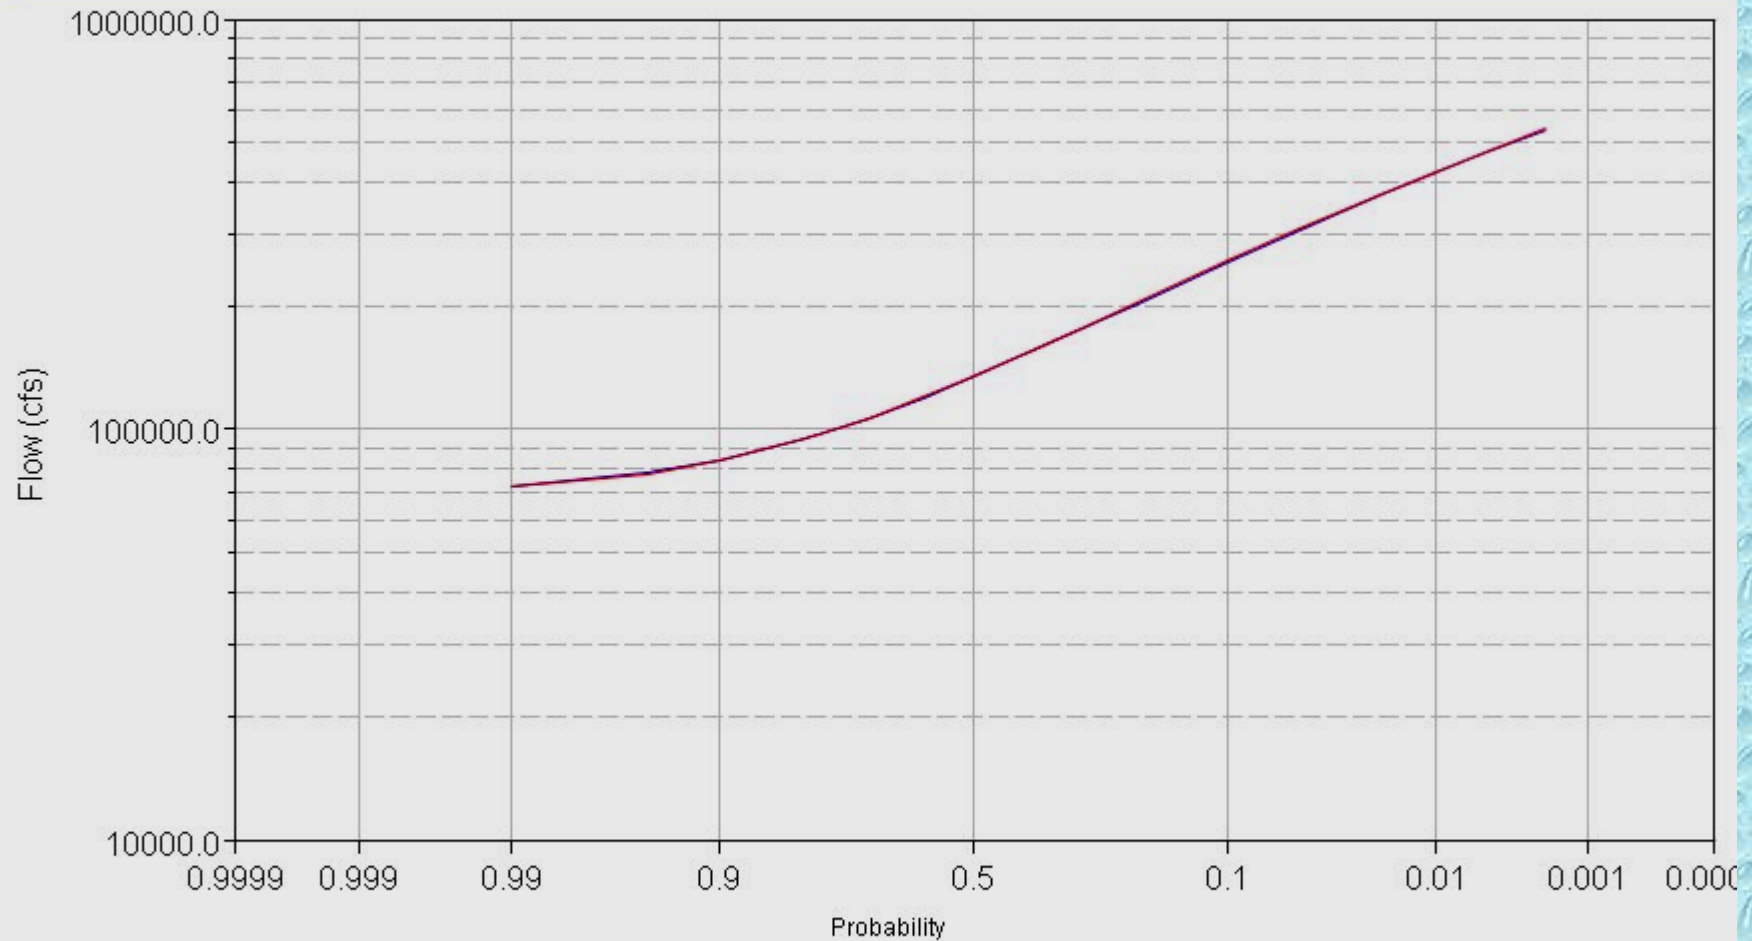

History/Background:

- **Operational Program: RiverWare**
- **RiverWare Selected by SWD-COE Team in 2000 for SUPER Replacement**
- **Lead to New Methods/Features in RiverWare**

History/Background:

- **Fall 2004 – Completed SUPER's Flood Control Logic into RiverWare**
- **2005 & 2006 – Conservation Pool**

CADSWES Effort for SWD COE:

2005 ?

Hydropower Analysis:

- **POR Load Requirements from SWPA**
- **New Hydropower Methods for COE-SWD**
- **Demands/Thermal Purchase/Dump Energy**
- **Minimum Sustained Release/Accounting
(Partial Power vs Daily TS)**

COE Flood Control Performance Study & Improvements by CADSWES

**Arkansas R. Model, 61 Years Daily TS
21 Reservoirs & 50 CP's**

91 Minutes to 66 Minutes

(Windows/Intel/4GB RAM)

- Reach: stepResponseRouting**
- Control Point: maxLevelForecast**

Other CADSWES Effort for **2005:**

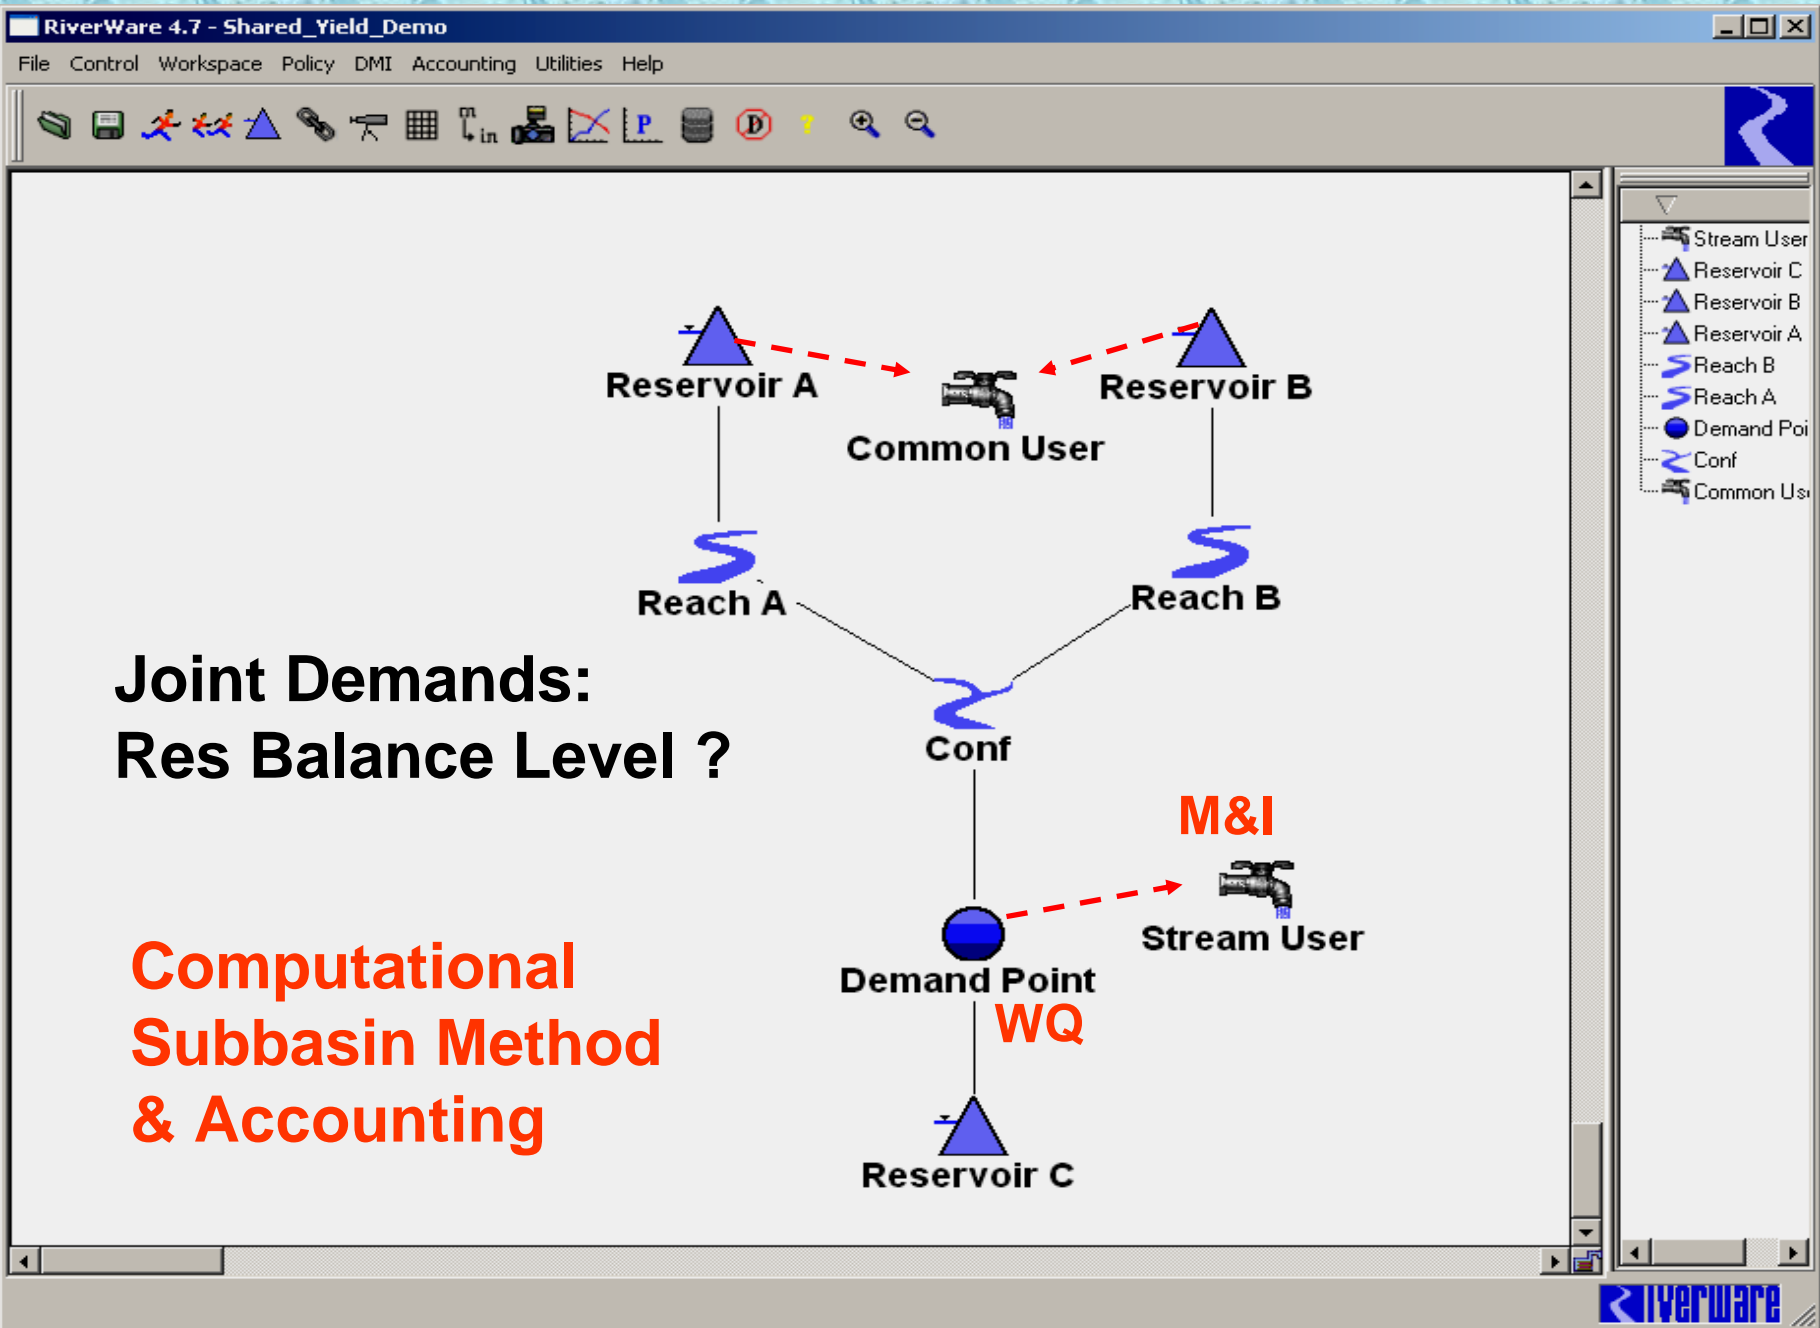

- **Imbedded DSS DMI GUI**
- **High Level Design of RiverWare CWMS Integration**
- **Reservoir Releases for Common DS Demands: Design Only**

CADSWES Effort for SWD COE:

2006 ?

Flood Control Evacuation Plan for Downstream Control Point

**Joint Demands:
Res Balance Level ?**

**Computational
Subbasin Method
& Accounting**

M&I

WQ

Additional Statistics:

- **Probability Scale**
- **Partial Duration**
- **Sorting by Month, etc**
- **Expand Output Format**
- **Snapshots for Comparing Runs**

Enhanced Routing:

- **Alternative Routing Coefficients for Large Flows**
- **Effects Flood Control Iteration Over Forecast Period**
- **This Year: Design only**

Other CADSWES 2006 Efforts:

- **Completion of Imbedded DSS DMI**
- **Additional Improvements with Runtime Performance**
- **RiverWare & COE-CWMS Integration**

SUPER to RiverWare Transition:

Tulsa District COE: Arkansas River
Red River
North Canadian River
Wichita River

Ft Worth District COE: Trinity River
Brazos River
Other?

Little Rock District COE: White River

Upcoming COE App's with RiverWare:

- **Tulsa's TAPER Program**
- **Bartlesville, OK M&I Study ?**
- **Red River Basin Master Manual Update**
- **Little Rock & Ft Worth Districts?**

End Reliance on SUPER: Fall 2006!
