

Center for Advanced Decision Support for  
Water and Environmental Systems (CADSWES)

UNIVERSITY OF COLORADO **BOULDER**

# **Integration with USACE CWMS, HEC-RTS, and HEC-WAT**

**2023 RiverWare User Group Meeting  
David Neumann and Bill Oakley**

# Modeling Frameworks

- Frameworks allow models to work together
  - Modeling different processes
  - From different agencies
  - Written in different languages
  - Have different interfaces
  - Have different data formats
- Often, the framework provides an interface for visualization and model control

# Adapters

- Model integration is implemented using **adapters**
- A model adapter is the software that “bridges” between the framework and the model
  - Controls model execution
  - Communicates between the framework and models
  - May convert data to a common format

# Some Modeling Frameworks

- USACE CWMS
- USACE HEC-RTS
- USACE HEC-WAT
  
- Deltares Delft-FEWS
- RiverSMART

# Adapter Architecture

CWMS, HEC-RTS, and HEC-WAT Plugin executes RiverWare as server, communicating with RiverWare across a network connection

# Corps Water Management System (CWMS)

- USACE modeling framework that integrates these and other models together
  - HEC MFP – Precipitation forecast
  - HEC HMS – Rainfall runoff
  -  RIVERWARE
  - HEC RAS – Flood inundation
  - HEC FIA – Flood Impacts Analysis
- Typically used for short-term operations
- Only available to USACE offices
- CWMS RiverWare Plugin: v1.8 released Sep 2021

# USACE HEC – RTS

- ReaTime Simulation
- Public version of CWMS
- RTS RiverWare Plugin: v1.1 Released 9/2021

# CWMS / RTS Adapter Version 2.0

- Work-in-progress to release one common application for both tools:
  - “HEC-RTS and CWMS RiverWare Plugin”
- Version 2.0
- To be released 9/2023

# CWMS Interface opens these RiverWare Dialogs

- SCT
- Scripts
- RPL Sets
- Objects

# CWMS “Compute”

- Each model is run in sequential order
- Data is automatically loaded
  - Input data from previous model
  - Output data sent to the next model
- All models use HEC-DSS for data transfer
- RiverWare uses DSS Database DMIs

# Aggregation / Disaggregation

- Methodology developed to run RiverWare model at different timestep size than CWMS model.
- Run daily RiverWare model in an hourly CWMS/RTS study
- Hasn't been tested extensively

# Training Modules

- Video training modules on [https://riverware.org/tutorials/CWMS\\_RTS/index.html](https://riverware.org/tutorials/CWMS_RTS/index.html)

## RiverWare in CWMS/RTS

These training videos present the methodology and modeling techniques to incorporate a RiverWare model into the Corps Water Management System (CWMS) and/or Real Time Simulation (RTS). The videos are intended for engineers, water managers, and system operators who have experience with RiverWare and CWMS/RTS. Please note, all content applies to CWMS and RTS, but the tutorials only work in CWMS v3.2.2.

Tutorials for each chapter can be found in the Resources tab within the chapter's player. The entire PDF can be downloaded from [https://riverware.org/tutorials/CWMS\\_RTS/RiverWare\\_CWMS.2021.09.pdf](https://riverware.org/tutorials/CWMS_RTS/RiverWare_CWMS.2021.09.pdf).

The files referenced in the tutorials can be downloaded from [https://riverware.org/tutorials/CWMS\\_RTS/Instructions.html](https://riverware.org/tutorials/CWMS_RTS/Instructions.html). Installation steps are also provided.

<i>Title</i>	<i>Description</i>	<i>Date Posted</i>
1. <a href="#">Training Introduction</a>	Overview of course content, intended audience, and how to use the video player.	2021-09-20
2. <a href="#">Overview</a>	Describes the overall approach of using a RiverWare model in the CWMS modeling frameworks.	2021-09-20
3. <a href="#">Setting up the Plugins</a>	Describes the approach to download and set up the CWMS RiverWare plugins.	2021-09-20
4. <a href="#">Preparing the RiverWare Model</a>	Describes aspects of the RiverWare model that must be set up before importing into the CWMS.	2021-09-20
5. <a href="#">Importing the RiverWare Model</a>	Describes the steps and interfaces to import the RiverWare model. Setting up the run sequence, forecast runs, and model linking are also described.	2021-09-20
6. <a href="#">Simulating with RiverWare in CWMS</a>	Describes the process of defining forecasts, making computes, viewing results, and iterating.	2021-09-20
7. <a href="#">Advanced Topics</a>	Describes debugging and diagnostics, how to make changes to the RiverWare CWMS configuration, and how to set up a RiverWare model at a different timestep than the other models in CWMS.	2021-09-20

# HEC – WAT

- **Watershed Analysis Tool**
- Planning version of CWMS/RTS
- v1.1 released 9/2021
  - No Flood Risk Analysis (FRA) computes
- v1.2 to be released 9/2023
  - Includes FRA computes – Monte Carlo simulation for uncertainty
  - Needs realistic testing: WAT study with RiverWare model and FRA compute

# Questions

- What is needed from these tools?
- Who is using CWMS or RTS?
- Who is using WAT?
